"A comprehensive, thoroughly researched, and deeply felt guide to one of the world's most beautiful and varied regions. Santa Barbara and the neighboring counties of San Luis Obispo and Ventura comprise a transitional zone where the plants and animals of Northern California mix with those of the south, creating diverse and dynamic habitats. Lucid explications of the geological and ecological forces that continue to shape and reshape the area are interspersed with personal accounts, as the author delights in the salty breath of a two-hundred-ton whale near the Channel Islands, the antics of beach hoppers along the shoreline, the explosion of wildflowers on the Carrizo Plain, memories of exploring the chaparral with her father, excursions into oak woodlands, and hikes to lofty peaks and canyons cloaked with pinyon pine and juniper. Enhanced with ample, specially commissioned photographs, maps, and charts, this book will broaden our understanding and deepen our enjoyment of a unique and constantly surprising region."--Back cover.

In this guide, biologist Mark Gustafson introduces residents and visitors to the history, geology, water resources, plants, and animals found in the nineteen counties occupying the eastern part of the Edwards Plateau, the heart of the Hill Country. He profiles three hundred of the most common and unique species from all of the major groups of plants and animals: trees, shrubs, wildflowers, cacti, vines, grasses, ferns, fungi, lichens, birds, mammals, reptiles, amphibians, fishes, and invertebrates. Color photographs are included for each species along with a brief description. He closes with a chapter on significant state parks and natural areas in the region as an invitation to visit and explore the Texas Hill Country. As large metropolitan areas continue to encroach on the Hill Country, newcomers are moving in and more people are flocking to its many attractions. This guidebook will enrich the appreciation of the region's rich and unique biodiversity and encourage conservation of the natural world encountered.
