The Arctic is undergoing rapid and dramatic environmental and social transformations due to climate change. This has ramifications for the entire planet, as change spreads through interconnected global networks that are environmental, cultural, economic and political. Today, with the major thrust of

research shifting away from deciphering causes and monitoring trends, the central preoccupation of a growing circle of actors has become the exploration of strategies for responding and adapting to climate change. But to understand the far-reaching nature of climate change impacts and the complexities of adaptation, a truly interdisciplinary approach is required. Unique in the UN system, UNESCO brings together the domains of natural sciences, social sciences, culture, education and communication. Given this broad mandate, UNESCO favors integrated approaches for monitoring and adapting to climate change in the Arctic, fostering dialogue among scientists, circumpolar communities and decision-makers. This book brings together the knowledge, concerns and visions of leading Arctic scientists in the natural and social sciences, prominent Chukchi, Even, Inuit and Saami leaders from across the circumpolar North, and international experts in education, health and ethics. They highlight the urgent need for a sustained interdisciplinary and multi-actor approach to monitoring, managing and responding to climate change in the Arctic, and explore avenues by which this can be achieved.--Publisher's description.

Written by the co-founder and former board president of a non-profit shared-use commercial kitchen, *Understanding Just Sustainabilities from Within* presents an intersectional analysis of CLiCK (Commercially Licensed Co-operative Kitchen), in order to explore what just sustainabilities can look and feel like from within and without. Through a unique combination of auto ethnography, participant observation, surveys and secondary research, this book offers insights into CLiCK's micro and macro successes, failures, and unknowns in relation to its attempt to put the concept of just sustainabilities into daily practice, and praxis. Developing its practical analyses from a theoretical basis, this book does not focus on definitive answers, recognizing instead that the closest we can get to understanding just sustainabilities in praxis is through long-term collective struggle and ultimately love. Researchers and educators who are interested in linking theory with practice, especially in relation to just Sustainabilities and intersectionality, will appreciate the theoretical grounding, making it desirable for multiple social science classes. Additionally, those involved with the social justice, food justice and just sustainabilities movements will benefit from the book's insights into best practices to address issues of social inequalities on the micro level, while also offering the benefits of a macro intersectional analysis.

... A rare and uplifting vision of the biological future we can and should create for ourselves.-Dr. Gregory Fahy, Chief Scientific Officer, Vice President of 21st Century Medicine  
The debate about the

ethics of human biotechnology or genetic engineering is one of the most important cultural issues of our time. Transhumanism is the philosophy that most of all supports genetic science and biotechnology, yet the public knows little about this emerging philosophy. Transhumanism declares unequivocal support for the attempt to eliminate disease, defeat death, and enhance the body and mind beyond the limitations of the age-old human condition. In *Designer Evolution* Simon Young presents a polemical espousal of transhumanist philosophy and a trenchant attack on its critics, the Bio-Luddites. The author calls for a rejection of premodern superstition and postmodern nihilism in favor of a renewed belief in human progress through scientific rationality. In an age when cynicism, fatalism, and nihilism are rife, *Designer Evolution* will rekindle a feeling of optimism about the future of our species. This is a concise, reader-friendly introduction to a vitally important philosophy that will become difficult to ignore as advances in biotechnology increasingly claim the headlines in the coming decades. Simon Young (Brighton, East Sussex, UK), the son of pioneering cybernetician and science writer J. F. Young, is an accomplished pianist who has performed throughout Europe.

Given the continuing cataclysmic shift in the economic landscape in the last few years, librarians have been forced to reevaluate not only the traditional services that they offer but also their continued existence and relevance to their academic institutions. Given the 'new normal' of tighter constraint on personnel and materials budgets, librarians now are compelled to find new ways of offering services and forging new relationships with departments and programs outside the traditional library setting. This volume highlights a number of projects being implemented in academic libraries including: rethinking the entire concept of a library, redefining physical space for new collaborative uses, adapting entrepreneurial techniques to acquire funding, creating new research tools and improving services, forging new consortial partnerships, allying more closely the mission of the library with that of the institution, and adapting public library programs to academic libraries. By re-examining the purpose of an academic library under continuing financial duress, librarians can ensure that their libraries will continue to have relevance to higher education. This book was published as a special issue of *College & Undergraduate Libraries*.

Covers the features and functions of the note-taking application, with information on such topics as creating a notebook, writing and formatting notes, putting an image in a note, linking notes, and using Evernote with Facebook.

A world of "smart" devices means the Internet can kill people. We need to act. Now. Everything is a computer. Ovens are computers that make things hot; refrigerators are computers that keep things cold. These computers—from home thermostats to chemical plants—are all online. The Internet, once a virtual abstraction, can now sense and touch the physical world. As we open our lives to this future, often called the Internet of Things, we are beginning to see its enormous potential in ideas like driverless cars, smart cities, and personal agents equipped with their own behavioral algorithms. But every knife cuts two ways. All computers can be hacked. And Internet-connected computers are the most vulnerable. Forget data theft: cutting-edge digital attackers can now crash your car, your pacemaker, and the nation's power grid. In *Click Here to Kill Everybody*, renowned expert and best-selling author Bruce Schneier examines the hidden risks of this new reality. After exploring the full implications of a world populated by hyperconnected devices, Schneier reveals the hidden web of technical, political, and market forces that underpin the pervasive insecurities of today. He then offers common-sense choices for companies, governments, and individuals that can allow us to enjoy the benefits of this omnipotent age without falling prey to its vulnerabilities. From principles for a more resilient Internet of Things, to a recipe for sane government regulation and oversight, to a better way to understand a truly new environment, Schneier's vision is required reading for anyone invested in human flourishing.
