Ideal as a quick, easy-to-use reference in the laboratory or clinical setting, Atlas of Diagnostic Hematology is an abundantly illustrated guide to the vast range of malignant and non-malignant disorders of the blood. More than 1,200 vibrant, full-color images enable you to identify and compare the unique clinical and histologic features of various blood disorders and confidently reach a diagnosis. Coverage includes photos of actual cases that span the entire range of this complex field, including rare conditions and difficult diagnoses. Features more than 1,200 images including full-color pathologic and clinical images covering a wide range of hematologic malignant and non-malignant conditions. Covers a range of disease stages, from the slightest indication where diagnosis can be complicated or missed entirely, to what the average blood or biopsy sample signifying disease may look like, to an advanced stage where disease indications are abundantly clear. Helps you distinguish between similar and overlapping features and symptoms to arrive at an accurate diagnosis. Provides up-to-date information on infectious processes in blood and bone marrow, classification system of myeloid neoplasms, and indolent and aggressive mature T and NK-cell lymphomas. Includes diagnostic algorithms with differential diagnoses for conditions with similar histologic features and clinical symptoms. Contains the latest WHO classifications for pathologic, genetic, and clinical information.

With a focus on real-time clinical decision making, Dr. Waldman's practical text helps increase your diagnostic accuracy in dynamic scanning of suspected pathology at the time the patient is being examined. This unique resource helps guide your targeted point-of-care ultrasound examination. Nearly 2,000 classic ultrasound images and anatomic drawings depict commonly encountered conditions, and Dr. Waldman's expert advice guides you clearly toward the correct clinical diagnosis.

This book is a compilation of endoscopic images of the upper gastrointestinal tract. The 3rd edition is enriched with high-resolution digital images highlighting the classification and staging of

endoscopically relevant diseases. Serial documentation of diseases and procedures like corrosive injury, variceal obliteration, peptic ulcer etc. provides a complete, informative and interesting perspective. Rare conditions like Dieulafoy's disease and Gastric antral vascular ectasia (GAVE) have been extensively discussed along with common diseases of the GI tract. This book outlines the technique and interpretation of endoscopic images proving to be a helpful guide to endoscopy practitioners. Key Features Explores various GI tract diseases through coloured, high resolution clinical photographs. Serves as a useful reckoner for trainee endoscopists and practitioners pursuing gastroenterology or gastrointestinal endoscopy. The text is updated with tables, flowcharts, classifications and international treatment guidelines.

The text of this second edition has been completely revised, planned and written with two goals in mind: to help those learning cytopathology for the first time, including pathology residents, fellows, and cytotechnology students, and to provide a resource for those who have experience in cytopathology but are faced with a difficult diagnostic dilemma. It reflects the fact that diagnostic criteria have become more refined, some types of aspiration are now more common, and terminology has changed.

Presents a sign-orientated approach to the diagnosis of both common and rare medical disorders that physicians may encounter in hospital or in the community. The comprehensive collection of clinical pictures, organised by anatomical region from scalp to sole, reflects actual clinical practice where a diagnosis has to be constructed from a single sign or a collection of signs. Fundamental, pathognomonic, and commonly seen non-specific clinical signs are presented with clinical features highlighted for rapid recognition and interpretation. In addition, the book provides guidance on appropriate bedside clinical tests for establishing diagnoses.

Diagnostic Atlas of Renal Pathology, by Agnes B. Fogo, MD and Michael Kashgarian, MD, delivers practical, highly visual guidance for effectively and accurately diagnosing a wide range of pathologic entities. More than 700 high-quality illustrations help you to recognize the pathologic features and clinical manifestations of both common and rare renal disorders and to formulate confident and accurate diagnoses. Thoroughly updated throughout, this companion to Brenner & Rector's The Kidney, 9th Edition provides the newest information regarding categorizing and classification of diseases and describes how this relates to the various morphological lesions illustrated and their clinical significance. See more than 700 high quality representative images of light, immunofluorescence, and electron microscopy for each diagnostic entity with correlations to clinical presentation and pathogenesis. Easily locate in-depth information on any disease's clinical course and treatment by cross-referring companion text, Brenner & Rector's The Kidney. Grasp key characteristic pathologic findings and prognostic, pathogenetic, and etiologic information through focused, detailed discussions. Make accurate, complete reports by fully understanding clinical correlations. Get an in-depth examination of pathophysiology, clinical presentations, and comprehensive references Keep current with the latest knowledge and evidence-based practices. Comprehensive updates throughout include a brand-new chapter on "Approaches to Chronic Kidney Disease" that includes coverage of Chronic Kidney Disease; Age-Related Sclerosis; Glomerular vs. Tubulointerstitial vs. Vascular Disease; and the differential diagnostic approach to Segmental Glomerulosclerosis lesions. Extensive updates to all previous chapters include new classifications of various diseases such as IgA nephropathy, diabetic nephropathy, crescentic GN, and renal transplant rejection. Stay well informed about hot topics including acute phosphate nephropathy; new concepts in the pathogenesis of thrombotic microangiopathies and eclampsia; and new information relative to etiology and pathogenesis of podocytopathies. Quickly access the information you need thanks to a user-friendly format, tables and sidebars with key points and differential diagnoses, and chapters that include concise, templated discussions regarding the etiology and pathogenesis of the disorder.

This text atlas, now in its second edition, presents in simplest form the basic diagnostic criteria used by the electron microscopist in studying neoplasms and other diseases encountered in the routine practice of pathology. Every field of electron microscopy is covered and low magnification plates are juxtaposed with higher magnifications to illustrate diagnostic features. The largest section of the book is devoted to neoplasms as this is the area in which most diagnostic problems occur. Renal glomerular disease is another important category in which ultrastructural study may be critical in diagnosis; infectious diseases, especially those of viral, protozoan, and unusual bacterial etiologies, are a third area in which electron microscopy may be used to establish or substantiate a diagnosis. All of these areas are comprehensively covered with concise, readable text and more than 800 first-quality images. This book is the preeminent reference for pathologists needing current information on the role of ultrastructure in diagnostic pathology.
