First published in 1979, Airport Engineering by Ashford and Wright, has become a classic textbook in the education of airport engineers and transportation planners. Over the past twenty years, construction of new airports in the US has waned as construction abroad boomed. This new edition of Airport Engineering will respond to this shift in the growth of airports globally, with a focus on the role of the International Civil Aviation Organization (ICAO), while still providing the best practices and tested fundamentals that have made the book successful for over 30 years.

A Linguistic History of Arabic presents a reconstruction of proto-Arabic by the methods of historical-comparative linguistics. It challenges the traditional conceptualization of an old, Classical language evolving into the contemporary Neo-Arabic dialects. Professor Owens combines established comparative linguistic methodology with a careful reading of the classical Arabic sources, such as the grammatical and exegetical traditions. He arrives at a richer and more complex picture of early Arabic language history than is current today and in doing so establishes the basis for a comprehensive, linguistically-based understanding of the history of Arabic. The arguments are set out in a concise, case by case basis, making it accessible to students and scholars of Arabic and Islamic culture, as well as to those studying Arabic and historical linguists.

This valuable and much needed reference/text provides details on proper communication between the lab and its clients, the rationale associated with the specimen requirements, and the correct procedures for specimen collection and management in the clinical microbiology laboratory. The first section looks at the premises on which quality microbiology diagnostic processes depend. It outlines the criteria that must be followed by the lab in the interest of good lab practice. The next section details the reasons why the lab must be involved in each part of the testing process, including the preanalytical, analytical and postanalytical steps. The rationale for stringent standards for specimen quality is also outlined. Section III gives instruction on how to select, collect, store and transport specimens for microbiological analysis. The last section contains excellent summary charts for quick reference for bacteriology, virology, mycology and parasitology specimens that can be used as a quick reference guide to answer most questions regarding the lab needs for a particular specimen.
