The need for large-scale bridges is constantly growing due to the enormous infrastructure development around the world. Since the 1970s many of them have been cable-stayed bridges. In 1975 the largest span length was 404 m, in 1995 it increased to 856 m, and today it is 1104 m. Thus the economically efficient range of cable-stayed bridges is tending to move towards even larger spans, and cable ...

7. Cable-stayed bridges offer the possibility of a symmetrical design. Although a suspension bridge and a cable-stayed bridge look very similar in their final design, the one significant advantage that you will find with the latter option is that the symmetry one can build into the span can help it to provide more stability and strength.
