Calibre Official Site You can search for a specific title or browse by genre (books in the same genre are gathered together in bookshelves). It ' s a shame that fiction and non-fiction aren ' t separated, and you have to open a bookshelf before you can sort books by country, but those are fairly minor quibbles.

By 2020, half of the world's population and most university students will have a supercomputer in their pockets. This revolution will affect the way students respond to higher education. The university classroom must henceforth engage students, and the classic lecture format alone might not be enough to do so. This book answers the question how university students can learn in the classroom what they cannot learn in any other way. The answer is inspired by options that are not available to political scientists - in the way that they are in the laboratories for the sciences, in the performances for the live arts, and in the studios for visual arts - as well as ideas that are already present, but not widespread in the discipline: problem-solving and case studies, as in the professional schools, and simulation exercises in many other disciplines. This book proposes therefore an active pedagogy for political science, at a time when active pedagogy is more important than ever. Prof. Laure Paquette, PhD, has been a visiting researcher or professor in 23 countries. She has advised several foreign governments as well as her own, Canada, and has published extensively in four languages. This is her sixteenth book.

Early one cold, wintry morning in late May 1942, the bullet-ridden body of Driver Roy Willis was found on the side of the road.

He had been shot a number of times with a military revolver. Despite extensive enquiries by some of the Victoria Police ' s most experienced homicide detectives, the murderer was not found. Then three months later, the killer struck again. In September 1942 Gunner John Hulston went missing whilst on guard duty. His gun crew immediately began a search. Two soldiers followed what appeared to be drag marks from the gate down towards the beach. They saw a figure some way off and thinking it was Hulston, they called out to him. Instead of a friendly reply, they were met with a barrage of bullets. The figure ran off and disappeared towards the camp. Incredibly the garrison was not turned out to search for the missing man or the mysterious figure. The searchlights which could have turned the night into day along the beach, were not activated. Hulston ' s rifle and bayonet were found in the water. His torn trousers were also found on the beach. His body was eventually recovered further along the coastline, 10 days later. Like Driver Willis, back in May, he had also been shot in the chest with a .455 calibre army revolver. As with any good murder mystery, this story has more twists and turns than the Great Ocean Road. They range from black market operations, confessions, suspects identified in later years, lost or missing police files, disagreements between the police and the army over the investigation, and an attempted cover-up that went all the way to the wartime Deputy Prime Minister ' s office.

This volume focuses on food preservation prior to distribution and sale, which is a major challenge in the tropical climates of most developing nations. In order to assure that food products are safe for human consumption, due importance must be given to the quality and safety aspects of production, processing, and distribution. This volume provides an informative overview of recent research on the therapeutic potential of various new and natural compounds along with novel technologies for enhanced shelf-life longevity and food safety. It also looks at the antimicrobial constituents of different sources and the history of their use as biopreservatives. It includes scientific evaluations of their use as alternative or potential biopreservatives. Focusing on real-life applications in consumer and food products, the book is divided into three parts, covering health and quality aspects of food preservation, applications of novel biomolecules for quality and safety of foods, and novel research techniques in food biopreservation.

Krakauer ' s page-turning bestseller explores a famed missing person mystery while unraveling the larger riddles it holds: the profound pull of the American wilderness on our imagination; the allure of high-risk activities to young men of a certain cast of mind; the complex, charged bond between fathers and sons. "Terrifying... Eloquent... A heart-rending drama of human yearning." —New York Times In April 1992 a young man from a well-to-do family hitchhiked to Alaska and walked alone into the wilderness north of Mt. McKinley. He had given \$25,000 in savings to charity, abandoned his car and most of his possessions, burned all the cash in his wallet, and invented a new life for himself. Four months later, his decomposed body was found by a moose hunter. How Christopher Johnson McCandless came to die is the unforgettable story of *Into the Wild*. Immediately after graduating from college in 1991, McCandless had roamed through the West and Southwest on a vision quest like those made by his heroes Jack London and John Muir. In the Mojave Desert he abandoned his car, stripped it of its license plates, and burned all of his cash. He would give himself a new name, Alexander Supertramp, and, unencumbered by money and

belongings, he would be free to wallow in the raw, unfiltered experiences that nature presented. Craving a blank spot on the map, McCandless simply threw the maps away. Leaving behind his desperate parents and sister, he vanished into the wild. Jon Krakauer constructs a clarifying prism through which he reassembles the disquieting facts of McCandless's short life. Admitting an interest that borders on obsession, he searches for the clues to the drives and desires that propelled McCandless. When McCandless's innocent mistakes turn out to be irreversible and fatal, he becomes the stuff of tabloid headlines and is dismissed for his naiveté, pretensions, and hubris. He is said to have had a death wish but wanting to die is a very different thing from being compelled to look over the edge. Krakauer brings McCandless's uncompromising pilgrimage out of the shadows, and the peril, adversity, and renunciation sought by this enigmatic young man are illuminated with a rare understanding--and not an ounce of sentimentality. Mesmerizing, heartbreaking, *Into the Wild* is a tour de force. The power and luminosity of Jon Krakauer's storytelling blaze through every page.

An experimental new Internet-based form of money is created that anyone can generate at home; people build frightening firetrap computers full of video cards, putting out so much heat that one operator is hospitalised with heatstroke and brain damage. A young physics student starts a revolutionary new marketplace immune to State coercion; he ends up ordering hits on people because they might threaten his great experiment, and is jailed for life without parole. Fully automated contractual systems are proposed to make business and the law work better; the contracts people actually write are unregulated penny stock offerings whose fine print literally states that you are buying nothing of any value. The biggest crowdfunding in history attracts \$150 million on the promise that it will embody “the steadfast iron will of unstoppable code”; upon release it is immediately hacked, and \$50 million is stolen. How did we get here? David Gerard covers the origins and history of Bitcoin to the present day, the other cryptocurrencies it spawned including Ethereum, the ICO craze and the 2017 crypto bubble, and the attempts to apply blockchains and smart contracts to business. Plus a case study on blockchains in the music industry. Bitcoin and blockchains are not a technology story, but a psychology story. Remember: if it sounds too good to be true, it almost certainly is. “A sober riposte to all the upbeat forecasts about cryptocurrency” — *New York Review of Books* “A very convincing takedown of the whole phenomenon” — *BBC News*
