Forensic science evidence and expert witness testimony play an increasingly prominent role in modern criminal proceedings. Science produces powerful evidence of criminal offending, but has also courted controversy and sometimes contributed towards miscarriages of justice. The twenty-six articles and essays reproduced in this volume explore the theoretical foundations of modern scientific proof and critically consider the practical issues to which expert evidence gives rise in contemporary criminal trials. The essays are prefaced by a substantial new introduction which provides an overview and incisive commentary contextualising the key debates. The volume begins by placingforensic science in interdisciplinary focus, with contributions from historical, sociological, Science and Technology Studies (STS), philosophical and jurisprudential perspectives. This is followed by closer examination of the role of forensic science and other expert evidence in criminal proceedings, exposing enduring tensions and addressing recent controversies in the relationship between science and criminal law. A third set of contributions considers the practical challenges of interpreting and communicating forensic science evidence. This perennial battle continues to be fought at the intersection between the logic of scientific inference and the psychology of the fact-finder'scommon sense reasoning. Finally, the volume's fourth group of essays evaluates the (limited) success of existing procedural reforms aimed at improving the reception of expert testimony in criminal adjudication, and considers future prospects for institutional renewal - with a keen eye to comparative law models and experiences, success stories and cautionary tales.

This work explores the social foundation of evidence law in a specific historical social and cultural context - the debate concerning the proof of the crime of witchcraft in early modern England. In this period the question of how to prove the crime of witchcraft was the centre of a public debate and even those who strongly believed in the reality of witchcraft had considerable concerns regarding its proof. In a typical witchcraft crime there were no eyewitnesses, and since torture was not a standard measure in English criminal trials, confessions could not be easily obtained. The scarcity of evidence left the fact-finders with a pressing dilemma. On the one hand, using the standard evidentiary methods might have jeopardized any chance of prosecuting and convicting extremely dangerous criminals. On the other hand, lowering the evidentiary standards might have led to the conviction of innocent people. Based on the analysis of 157 primary sources, the book presents a picture of a diverse society whose members tried to influence evidentiary techniques to achieve their distinct goals and to bolster their social standing. In so doing this book further uncovers the interplay between the struggle with the evidentiary dilemma and social characteristics (such as class, position along the centre/periphery axis and the professional affiliation) of the participants in the debate. In particular, attention is focused on the professions of law, clergy and medicine. This book finds clear affinity between the professional affiliation and the evidentiary positions of the participants in the debate, demonstrating how the diverse social players and groups employed evidentiary strategies as a resource, to mobilize their interests. The witchcraft debate took place within the formative era of modern evidence law, and the book highlights the mutual influences between the witch trials and major legal developments.

Providing a comprehensive and principled account of the uncertainty problem that arises in tort litigation, this text critically examines the existing doctrinal solutions of the problem, as evolved in England, United States, Canada & Israel.

Relevant to, and drawing from, a range of disciplines, the chapters in this collection show the diversity, and applicability, of research in Bayesian argumentation. Together, they form a challenge to philosophers versed in both the use and criticism of Bayesian models who have largely overlooked their potential in argumentation. Selected from contributions to a multidisciplinary workshop on the topic held in Sweden in 2010, the authors count linguists and social psychologists among their number, in addition to philosophers. They analyze material that includes real-life court cases, experimental research results, and the insights gained from computer models. The volume provides, for the first time, a formal measure of subjective argument strength and argument force, robust enough to allow advocates of opposing sides of an argument to agree on the relative strengths of their supporting reasoning. With papers from leading figures such as Michael Oaksford and Ulrike Hahn, the book comprises recent research conducted at the frontiers of Bayesian argumentation and provides a multitude of examples in which these formal tools can be applied to informal argument. It signals new and impending developments in philosophy, which has seen Bayesian models deployed in formal epistemology and philosophy of science, but has yet to explore the full potential of Bayesian models as a framework in argumentation. In doing so, this revealing anthology looks destined to become a standard teaching text in years to come.

This volume includes discussions on the concept of education and such related topics as indoctrination and the nature and scope of the theory of education.

While the law of evidence has dominated jurisprudential treatment of the subject, evidence is in truth a multi-disciplinary subject. This book is a collection of materials concerned not only with the law of evidence, but also with the logical and rhetorical aspects of proof; the epistemology of evidence as a basis for the proof of disputed facts; and scientific aspects of the subject. The editor raises issues such as the philosophical basis for the use of evidence; whether courtroom proof is essentially mathematical or non-mathematical; and the use of different theories of probability in legal reasoning.
