This volume explores 25 case studies of fiscal measures that have been adopted successfully by governments in North America and Europe to reduce environmental degradation. Each study lays out the implementation issues and problems faced, and compares the effectiveness of the measure against its expectations. The political implications are also discussed, and the text draws on common themes and lessons to be gained from the measures so far. The volume is divided into sections on energy, agriculture, air and water pollution, and waste management.

It is becoming increasingly apparent that governments must reform and restructure their budgets, using economic incentives and instruments to ensure sustainable development and sound environmental management. Using 25 detailed case studies from around the world, Green Budget Reform highlights some of the most useful fiscal measures taken so far to reduce environmental impacts and promote sustainability. The case studies range from the UK's recent landfill tax to water charges in France and fuel conservation in Ontario, and cover the energy, automotive, agricultural and waste management sectors, air and water pollution, and environment and development policy initiatives. In each, the authors look at the implementation of the fiscal measure, its expected results, its actual impacts, its political implications, and its applicability to other countries. The case studies are accompanied by a comprehensive introduction which examines the key issues and themes and looks at further fiscal measures to ensure sustainable development for the future.

This book exemplifies activities undertaken by selected enterprises towards resolving significant problems related to green controlling and finance. It presents how the analysed enterprises employ (or may employ) green controlling for coordination of initiatives in environmental and social dimensions. The authors focused primarily on the financial angle of the solutions regarding environmental and social aspects within the scope of corporate strategy, value creation, financial planning, budgeting, indicator analysis, reporting, cost management, investment appraisal, risk analysis and estimation of capital cost. The analyses performed enabled the researchers to prove that elements of green controlling connected with finance are present in the discussed enterprises and may serve as examples of good practices for other business entities striving to increase enterprise value in the long run.

'Greening the Budget offers a useful, and welcome, addition to the literature available to the environmental policymaker. The book can inspire policymakers to take a fresh look at old problems, help us to ask new questions and stimulate proposals for new solutions' . . . Students of things environmental will find the book an inspiration for essay projects and research programs.' - Thorolfur Matthiasson, Environmental and Resource Economics Greening the Budget regards the fundamental cause of environmental degradation as government and market failure and proposes the use of budgets as an instrument of environmental policy to rectify this problem. The book focuses on the elements of the public budget which currently affect the environment and explores the scope for greening both revenue and expenditure through specific measures.

Budgets have a big influence on the economy and society. With many countries, about 50 percent of total expenditures and income pass through the budget via taxes, charges and expenditures. In recent years many countries, e. g. in the OECD and the EU, have tended to use this influence in an environmentally rational way. T radi tional environmental policy has relied on command-and-control and cnd-olpnc technologies that have proven to be insufficient in coping with the challenge of glo bal change. Hence, many countries have started to investigate the environmental impacts of their budgets by looking at existing taxes and charges, as well as tax allowances and exemptions and other relevant regulations and expenditures -even to have a special impact on the environment. The implementation of those not meant such findings is now broadly discussed in these countries. This publication will contribute to the debate. It is a result of a wider project called Green Budget Reform -Prospects in Central and Eastern Europe. initiated by Vida Ogorelec Wagner, managing Director of Umanotera, The Sloven ian Founda tion for Sustainable Development, and then jointly developed. proposed to the EC and carried out in partnership with Kai Schlegelmich of the Wuppertal Institute in Germany. The project comprised an international seminar on Green Budget Reform in April 1997 at Lake Bled, Slovenia, and the Case Study of Sloveilla.

Green budget tagging can be a useful tool in an overall approach to green budgeting. This introductory guidance was developed by the OECD under the Paris Collaborative on Green Budgeting in collaboration with institutional partners working under Helsinki Principle 4 of the Coalition of Finance Ministers for Climate Action (IADB, IMF, UNDP, World Bank) and draws lessons from existing country practices.

This publication presents five governmental experiments aimed at promoting sustainable development in Canada, Germany, Japan, the Netherlands and the United Kingdom.

The definitive, practical, go-to resource guide on helping all charities become more "green" Nonprofit Guide to Going Green is your comprehensive learning tool to guide nonprofits and NGOs towards becoming greener. A desktop reference for any charitable organization to become greener, this essential book gives your organization the support it needs to take proactive steps to protect the environment while fulfilling its mission. Timely and clearly written, with contributions from experts from around the globe, Nonprofit Guide to Going Green leads the way in helping charities in all countries meet this challenge. Helps nonprofits green their efforts and carbon footprint \* Shows CEOs, presidents, deans, marketing officers, board members proactive steps they can take to protect the environment \* Teaches how to do a self-audit and plan for a more environmentally sensitive future \* Nonprofit Guide to Going Green delivers a timely and essential call to action for this new century. Can your organization afford not to "go green?"
