### Gut Insight: probiotics and prebiotics for digestive

Gut Insight, probiotics and prebiotics for digestive health and well-being.

### Gut Insight – probiotics and prebiotics

Probiotics. A good way to explain probiotics is by thinking of them as fertilisers in our gardens, to help feed and grow all our plants. By adding a probiotic to our diet, we can similarly feed and help our gut bacteria grow strong to benefit our overall ecosystem. Many plant foods contain different types of probiotics.

### Prebiotics & Probiotics – Guts-LK

Instead, probiotics travel to our lower gastrointestinal tract where they're fermented by probiotic bacteria. In a nutshell, probiotics are microorganisms that are beneficial for our health, and prebiotics are what feed probiotics. Fruit, vegetables, cereals and other edible plants all have potential to provide probiotics.

### Gut Check: Probiotics and Probiotics – Food insight

Two parts of our diet that are uniquely able to affect the microbiome are probiotics and prebiotics. Probiotics are live microorganisms that offer a health benefit—for example, by helping to enhance or restore health to our gut microbiome. Many of the microorganisms that naturally live in our bodies are similar to microorganisms found in probiotic foods, drinks and dietary supplements.

### Nutrition 101: Probiotics, Prebiotics and the Gut

The current definition of a probiotic, according to the International Scientific Association for Probiotics and Prebiotics (ISAPP), is: "A probiotic is a substrate that is selectively utilised by host microorganisms conferring a health benefit." However, this current definition of a probiotic is highly likely to change in the future.

, is a probiotic that can be used as food for gut bacteria. Onions, garlic, artichokes, and legumes are also probiotic sources. When a food source contains both prebiotics and probiotics, the...

### Probiotics vs. Prebiotics: Can You Take Them Together?

Like probiotics, you can take prebiotics through both food and supplements. Probably the most common probiotic food is yogurt. Yogurt is made by fermenting milk with different bacteria, which are left in the final product. Other bacteria-fermented foods, such as sauerkraut, kombucha and kimchi, are also good sources of probiotics.
