With over 30,000 employees worldwide and
products that range from refrigerators to
cell phones, Haier is the largest consumer
electronics manufacturer in China. This book
traces this giant's path to success, from its
early bleak years when the company director
had to beg from the neighboring village head
for money to pay bonuses to his employees to
its achievement of placing sixth on Forbes
Global's worldwide household appliance
manufacturer in 2001. Much emphasis is given
to Zhang Ruimin, Haier's chairman and CEO,
for his pivotal role in the company's
success. Explained is how Haier excelled
where many other Chinese companies did not: a
commitment to quality, service, and
technology innovation, in addition to a

global vision and a management style that is a blend of Jack Welch and Confucius.

Few countries have integrated into the world economy as fast - or as dramatically - as China has since 1978. The world's most populous country is emerging as a world workshop and export machine: a visit to a department store in any country will unearth a plethora of goods manufactured in the People's Republic. China is now the world's fourth largest exporting nation. In this important book, Kevin Zhang brings together an international team of contributors to analyze this development process. Taking a thematic approach, the book covers: * manufacturing exports and the world workshop * foreign capital and china's industrial development * challenges from the WTO and openness. This topical analysis will be an excellent resource for postgraduate students and researchers in the fields of Asian and Chinese studies, export studies, and economics.

challenges and experiences related to digital entrepreneurial activities, using carefully selected examples from leading companies and economies that shape world business today and tomorrow. Digital entrepreneurship and the companies steering it have an enormous global impact; they promise to transform the business world and change the way we communicate with each other. These companies use digitalization and artificial intelligence to enhance the quality of decisions and augment their business and customer operations. This book demonstrates how cloud services are continuing to evolve; how cryptocurrencies are traded in the banking industry; how platforms are created to commercialize business, and how, taken together, these developments provide new opportunities in the digitalized era. Further, it discusses a wide range of digital factors changing the way businesses operate, including artificial intelligence, chatbots, voice search, augmented and virtual reality, as well as cyber threats and data privacy management. "Digitalization mirrors the Industrial Revolution's impact. This book provides a complement of perspectives on the opportunities emanating from such a deep seated change in our economy. It is a comprehensive collection of thought leadership mapped into a very useful framework. Scholars, digital entrepreneurs and practitioners will benefit from this timely work."
