In *How the West Was Lost*, the New York Times bestselling author Dambisa Moyo offers a bold account of the decline of the West's economic supremacy. She examines how the West's flawed financial decisions have resulted in an economic and geopolitical seesaw that is now poised to tip in favor of the emerging world, especially China. Amid the hype of China's rise, however, the most important story of our generation is being pushed aside: America is not just in economic decline, but on course to become the biggest welfare state in the history of the West. The real danger is at home, Moyo claims. While some countries – such as Germany and Sweden – have deliberately engineered and financed welfare states, the United States risks turning itself into a bloated welfare state not because of ideology or a larger vision of economic justice, but out of economic desperation and short-sighted policymaking. *How the West Was Lost* reveals not only the economic myopia of the West but also the radical solutions that it needs to adopt in order to assert itself as a global economic power once again.

The defining geopolitical contest of the twenty-first century is between China and the US. But is it avoidable? And if it happens, is the outcome already inevitable? China and America are world powers without serious rivals. They eye each other warily across the Pacific; they communicate poorly; there seems little natural empathy. A massive geopolitical contest has begun. America prizes freedom; China values freedom from chaos. America values strategic decisiveness; China values patience. America is becoming society of lasting inequality; China a meritocracy. America has abandoned multilateralism; China welcomes it. Kishore Mahbubani, a diplomat and scholar with unrivalled access to policymakers in Beijing and Washington, has written the definitive guide to the deep fault lines in the relationship, a clear-eyed assessment of the risk of any confrontation, and a bracingly honest appraisal of the strengths and weaknesses, and superpower eccentricities, of the US and China.

Examines why the West has failed to achieve its objectives in Afghanistan, discussing the country's drug trade, political corruption, troubled relations with Pakistan, and harsh terrain, and the lessons about nation building that can be learned from the experience.

Westerners love an existential crisis. Each decade since the First World War has raised up prophets of doom proclaiming the end of the Western world as we know it. But this time it's real. Weighed down by economic woes, the seemingly endless war on terror, and the declining power of religion as a unifying force, the West has been limping along. With the public sphere fraying and authoritarian politics rising, this deep-seated crisis is now urgent, and potentially fatal. How did we get here? Ben Ryan's diagnosis is simple: the West is a myth, and it is dying. Its own people are no longer convinced or united by its defining ideal--a sense of universal morals, and of constant progress towards them. Following a series of 'system failures', Westerners--from urban millennials to post-industrial workers-- have lost faith in the West as a moral force. Yet there is a chance for redemption, if we can forge a new common myth of the West: one reviving its great values, and reshaping its ideals for a diverse, forward-looking world. This smart and thoughtful book explores what the West is, what has happened to it, and how we might save it.

In this magisterial work, leading cultural critic Mary Eberstadt delivers a powerful new theory about the decline of religion in the Western world. The conventional wisdom is that the West first experienced religious decline, followed by the decline of the family. Eberstadt turns this standard account on its head. Marshalling an impressive array of research, from fascinating historical data on family decline in pre-Revolutionary France to contemporary popular culture both in the United States and Europe, Eberstadt shows that the reverse has also been true: the undermining of the family has further undermined Christianity itself. Drawing on sociology, history, demography, theology, literature, and many other sources, Eberstadt shows that family decline and religious decline have gone hand in hand in the Western world in a way that has not been understood before—that they are, as she puts it in a striking new image summarizing the book's thesis, “the double helix of society, each dependent on the strength of the other for successful reproduction.” In sobering final chapters, Eberstadt then lays out the enormous ramifications of the mutual demise of family and faith in the West. While it is fashionable in some circles to applaud the decline both of religion and the nuclear family, there are, as Eberstadt reveals, enormous social, economic, civic, and other costs attendant on both declines. Her conclusion considers this tantalizing question: whether the economic and demographic crisis now roiling Europe and spreading to America will have the inadvertent result of reviving the family as the most viable alternative to the failed welfare state—fallout that could also lay the groundwork for a religious revival as well. *How the West Really Lost God* is both a startlingly original account of how secularization happens and a sweeping brief about why everyone should care. A book written for agnostics as well as believers, atheists as well as “none of the above,” it will permanently change the way every reader understands the two institutions that have hitherto undergirded Western civilization as we know it—family and faith—and the real nature of the relationship between those two pillars of history.

For centuries, the Asians (Chinese, Indians, Muslims, and others) have been bystanders in world history. Now they are ready to become co-drivers. Asians have finally understood, absorbed, and implemented Western best practices in many areas: from free-market economics to modern science and technology, from meritocracy to rule of law. They have also become innovative in their own way, creating new patterns of cooperation not seen in the West. Will the West resist the rise of Asia? The good news is that Asia wants to replicate, not dominate, the West. For a happy outcome to emerge, the West must

gracefully give up its domination of global institutions, from the IMF to the World Bank, from the G7 to the UN Security Council. History teaches that tensions and conflicts are more likely when new powers emerge. This, too, may happen. But they can be avoided if the world accepts the key principles for a new global partnership spelled out in *The New Asian Hemisphere*.

The West's two-century epoch as global powerhouse is at an end. A new world order, with China and India as the strongest economies, dawns. How will the West react to its new status of superpower in decline? In Kishore Mahbubani's timely polemic, he argues passionately that the West can no longer presume to impose its ideology on the world, and crucially, that it must stop seeking to intervene, politically and militarily, in the affairs of other nations. He examines the West's greatest follies of recent times: the humiliation of Russia at the end of the Cold War, which led to the rise of Putin, and the invasion of Iraq after 9/11, which destabilised the Middle East. Yet, he argues, essential to future world peace are the Western constructs of democracy and reason, which it must continue to promote, by diplomacy rather than force, via multilateral institutions of global governance such as the UN. Only by recognising its changing status, and seeking to influence rather than dominate, he warns, can the West continue to play a key geopolitical role. 'Kishore Mahbubani might well be the most intelligent, friendly and doggedly persistent critic of the West. In this brief book, he delivers some of his trademark analysis and pungent observations. We should all think of it as the cold shower that is urgently needed to revive the West' Fareed Zakaria, author of *The Post-American World* 'A powerful, disputatious book. It's not comfortable reading, and it wasn't meant to be' Paul Kennedy, Director of International Security Studies and Professor of History at Yale University

Spengler's work describes how we have entered into a centuries-long "world-historical" phase comparable to late antiquity, and his controversial ideas spark debate over the meaning of historiography.

When faced with global instability and economic uncertainty, it is tempting for states to react by closing borders, hoarding wealth and solidifying power. We have seen it at various times in Japan, France and Italy and now it is infecting much of Europe and America, as the vote for Brexit in the UK has vividly shown. This insularity, together with increased inequality of income and wealth, threatens the future role of the West as a font of stability, prosperity and security. Part of the problem is that the principles of liberal democracy upon which the success of the West has been built have been suborned, with special interest groups such as bankers accruing too much power and too great a share of the economic cake. So how is this threat to be countered? States such as Sweden in the 1990s, California at different times or Britain under Thatcher all halted stagnation by clearing away the powers of interest groups and restoring their societies' ability to evolve. To survive, the West needs to be porous, open and flexible. From reinventing welfare systems to redefining the working age, from reimagining education to embracing automation, Emmott lays out the changes the West must make to revive itself in the moment and avoid a deathly rigid future.
