reference. Respected editors Bernadette Rodak, George Fritsma, and Elaine Keohane are well known in the hematology/clinical laboratory science world. Student resources on the companion Evolve website include the glossary, weblinks, and content updates. New content is added on basic cell biology and etiology of leukocyte neoplasias. Updated Molecular Diagnostics chapter keeps you current on techniques being used in the lab. Simplified hemostasis material ensures that you can understand this complex and important subject. Coverage of morphologic alteration of monocytes/macrophages is condensed into a table, as the disorders in this grouping are more of a biochemical nature with minimal hematologic evidence.

An excellent companion to Rodak's Hematology: Clinical Principles & Applications, this atlas is ideal for helping you accurately identify cells at the microscope. It offers complete coverage of the basics of hematologic morphology, including examination of the peripheral blood smear, basic maturation of the blood cell lines, and discussions of a variety of clinical disorders. Over 400 photomicrographs, schematic diagrams, and electron micrographs visually clarify hematology from normal cell maturation to the development of various pathologies. Normal Newborn Peripheral Blood Morphology chapter covers the unique normal cells found in neonatal blood. A variety of high-quality schematic diagrams, photomicrographs, and electron micrographs visually reinforce your understanding of hematologic cellular morphology. Spiral binding and compact size make this book easy to use in a laboratory setting. Coverage of common cytochemical stains, along with a summary chart for interpretation, aids in classifying malignant and benign leukoproliferative disorders. Morphologic abnormalities are presented in chapters on erythrocytes and leukocytes, along with a schematic description of each cell, to provide correlations to various disease states. Body Fluids chapter covers the other fluids found in the body besides blood, using images from cytocentrifuged specimens. Updated information on the subtypes of chronic lymphocytic leukemia (CLL) helps you recognize variant forms of CLL you may encounter in the lab.

Lippincott Williams & Wilkins is pleased to introduce the second edition of Anderson's Atlas of Hematology, the most comprehensive atlas for the laboratory technologist. Understanding that effectiveness as a technician comes through the ability to identify what one sees under the microscope, this atlas equips students with visual examples of the concepts covered in their programs. This new edition has been thoroughly updated and revised based on the latest basic science and clinical findings. In addition, you'll find new, higher-quality images as well as the most recent World Health Organization classification of hematologic disorders. With its four-color illustrations and clear descriptions, this atlas enables you to describe and identify all stages in the development of blood cells. Moreover, it provides an illustrated guide to a broad range of hematologic disorders. Used as a quick reference, study guide, or

atlas, this is an invaluable tool for today's laboratory technician student, helping them clearly identify the very types of hematologic images they will encounter in practice.

This second edition provides comprehensive coverage of all areas of clinical haematology, including: bone marrow evaluation; blood cellcytochemistry; body fluid evaluation; haematologic instrumentation; and quality control and quality assurance for haematology and haemostasis laboratories.

The purpose of this text is to present a complete hematology course for Clinical Laboratory Science (CLS) students, as well as to provide a resource for clinical laboratory practitioners, medical students, and residents. It presents an in-depth study of cell counting, morphologic differentiation and evaluation, and related areas, such as flow cytometry, immunohistochemistry, and cytogenetics. A chapter on specific age groups covers the unique aspects of hematology in the pediatric and geriatric populations. A section on the etiology and treatment of leukocyte neoplasms has been included to provide some insight into the special considerations of oncologic disorders. Chapters begin with an outline and learning objectives, and color figures are presented as close to the citation as possible to facilitate understanding of the discussion. Most chapters end with a summary, and in many cases, review questions or case studies are included to assess or reinforce understanding of the material.
