The HSC-100R utilises a very high-quality digital triax system that expands its operability in field applications, as well as for studio production. This digital triax system can be integrated into conventional triax-based infrastructures, enabling an easy upgrade from existing systems. The latest digital triax transmission system offers long cable runs of up to 1200 m via ø14.5 mm cable between the camera and the HSCU-300R.

This volume contains selected and expanded contributions presented at the 3rd Symposium on Space Optical Instruments and Applications in Beijing, China June 28 – 29, 2016. This conference series is organised by the Sino-Holland Space Optical Instruments Laboratory, a cooperation platform between China and the Netherlands. The symposium focused on key technological problems of optical instruments and their applications in a space context. It covered the latest developments, experiments and results regarding theory, instrumentation and applications in space optics. The book is split across five topical sections. The first section covers space optical remote sensing system design, the second advanced optical system design, the third remote sensor calibration and measurement. Remote sensing data processing and information extraction is then presented, followed by a final section on remote sensing data applications.

Topic Editor Prof. Xing is in collaboration with ATCC (<https://www.atcc.org/>) on testing some of their cell lines in research. All other Topic Editors declare no competing interests with regards to the Research Topic subject.

This timely volume explores various techniques for tissue and organ regeneration using stem cells isolated from adult tissues. It discusses alternative explanations of stem cell plasticity as well as current clinical results with adult stem cell therapies. It examines the presence of potential pluripotent stem cells in adult tissues, paracrine effects of stem cell therapies, and involvement of exosomes and microparticles into observed phenomena. Fifteen chapters, all written by noted leaders of their fields, focus on a variety of topics including cord blood and hematopoietic stem cells, skin and tissue organ regeneration, very small embryonic-like stem cells, and cell therapies in cardiology, neonatology, and neurology. Edited by Dr. Mariusz Ratajczak, an internationally known specialist in adult stem cell biology, Adult Stem Cell Therapies: Alternatives to Plasticity is an important addition to the Stem Cell Biology and Regenerative Medicine series.

This book is about the creation and 14 year evolution of a public alternative inner-city high school.

Renamed to reflect the increased role of digital electronics in modern flight control systems, Cary Spitzer's industry-standard Digital Avionics Handbook, Second Edition is available in two comprehensive volumes designed to provide focused coverage for specialists working in different areas of avionics development. The second installment, Avionics: Development and Implementation explores the practical side of avionics. The book examines such topics as modeling and simulation, electronic hardware reliability, certification, fault tolerance, and several examples of real-world applications. New chapters discuss RTCA DO-297/EUROCAE ED-124 integrated modular avionics development and the Genesis platform.

The current literature on dynamic systems is quite comprehensive, and system theory's mathematical jargon can remain quite complicated. Thus, there is a need for a compendium of accessible research that involves the broad range of fields that dynamic systems can cover, including engineering, life sciences, and the environment, and which can connect researchers in these fields. The Handbook of Research on Modeling, Analysis, and Control of Complex Systems is a comprehensive reference book that describes the recent developments in a wide range of areas including the modeling, analysis, and control of dynamic systems, as well as explores related applications. The book acts as a forum for researchers seeking to understand the latest theory findings and software problem experiments. Covering topics that include chaotic maps, predictive modeling, random bit generation, and software bug prediction, this book is ideal for professionals, academicians, researchers, and students in the fields of electrical engineering, computer science, control engineering, robotics, power systems, and biomedical engineering.
