Introduction To Cdma Wireless Communications

This chapter introduces cellular code division multiple access (CDMA) communications technology in cellular systems and explores single-user detection techniques. In the CDMA scheme, each user is assigned a unique code sequence. The cellular structure of a wireless network consists of clusters of cells.

1. CDMA (Code Division Multiple Access) is a direct-sequence spread spectrum (DSSS) based technique for multiplexing.
2. Principle: – CDMA assigns a unique code sequence to each user which is used to code data before transmission. – If a receiver knows the code sequence related to a user, it is able to decode the received data.
