Learn how to identify the limiting reactant in a chemical reaction and use this information to calculate the theoretical and percent yields for the reaction. If you're seeing this message, it means we're having trouble loading external resources on our website.

Limiting reactant and reaction yields (article) | Khan Academy

The percent yield is the ratio of the actual yield to the theoretical yield, expressed as a percentage. $\frac{\text{Percent Yield}}{\text{Theoretical Yield}} \times 100\%$ Percent yield is very important in the manufacture of products. Much time and money is spent improving the percent yield for chemical production.

8.6: Limiting Reactant, Theoretical Yield, and Percent ...

When reactants are not present in stoichiometric quantities, the limiting reactant determines the maximum amount of product that can be formed from the reactants. The amount of product calculated in this way is the theoretical yield, the amount obtained if the reaction occurred perfectly and the purification method were 100% efficient.

8.5: Limiting Reactant and Theoretical Yield - Chemistry ...

Once the limiting reactant is completely consumed, the reaction would cease to progress. The theoretic yield of a reaction is the amount of products produced when the limiting reactant runs out. This worked example chemistry problem shows how to determine the limiting reactant and calculate the theoretical yield of a chemical reaction.

Limiting Reactant & Theoretical Yield (Worked Problem)

The limiting reagent depends on the mole ratio, not on the masses of the reactants present. Limiting Reagent Before and After Reaction. ... These reagents are very important while calculating the percentage yield of a given reaction. Frequently Asked Questions – FAQs.

How to find Limiting Reagents? - Detailed Explanation with ...

So sulfuric acid is the limiting reagent and is the reagent you should use to calculate the theoretical yield: Theory predicts that 46.59 g of sodium sulfate product is possible if the reaction proceeds perfectly and to completion. But the question states that the actual yield is only 37.91 g of sodium sulfate.
