Metronomic chemotherapy is the use of low-dose, regular (daily to every other day) oral chemotherapy. This is a treatment that has a very low chance of acute side effects; and it is given at home, rather than at the oncologist's office, so visits are minimized. Typical chemotherapy treatment involves high doses of chemotherapy to try to kill ...

~~Metronomic Chemotherapy - Veterinary Specialty Center~~

Metronomic chemotherapy is continuous low dose oral chemotherapy. The metronomic protocol consists of multiple drugs including an oral chemotherapy agent, an antibiotic (doxycycline) and a non-steroidal anti-inflammatory (NSAID). The daily low dose oral chemotherapy is targeting the tumor vascular cells directly.

~~Veterinary Articles: Metronomic Chemotherapy by Edwin ...~~

In veterinary medicine, there have been several studies published that give promise to the principle of metronomic or anti-angiogenic therapy. In dogs with incompletely resected soft tissue sarcomas, Elmslie, et al. [J Vet Intern Med 2008;22(6):1373-9] showed that the use of low dose daily cyclophosphamide (cytoxan) and piroxicam (feldene) extended the time to recurrence over patients treated with surgery alone.

~~Metronomic Chemotherapy - Animal Cancer and Imaging Center~~

Metronomic Chemotherapy as an Option. The battle against cancer often involves initial skirmishes using surgery, chemotherapy or radiation therapy to make the cancer retreat into remission. Recurrences are fought along the way until the cancer claims the victim with its fatal agenda. In veterinary medicine, metronomic chemotherapy may be the best option to pursue in selected patients or in all patients depending on the disposition of the pet owner.

~~Metronomic chemotherapy (Proceedings) | EMM 360~~

Metronomic chemotherapy has been shown to be useful for soft tissue sarcomas and splenic haemangiosarcoma, but may be useful in a wider variety of tumour types, e.g. tumours of the nose. Willows offers a comprehensive approach to chemotherapy for dogs and cats with cancer with drug treatment protocols that are tailored to the patient's needs and the client's wishes.

~~Metronomic Chemotherapy - Willows Vets - Veterinary ...~~

Dr. Biller reports that, despite promising results, metronomic chemotherapy is still considered investigational and is not offered as a first-line therapy. Dr. Biller cites nine published clinical trials of metronomic chemotherapy in dogs and cats. The treatment is easy to administer, reasonably priced and well tolerated.

~~Metronomic Chemotherapy in Veterinary Patients with Cancer ...~~

Metronomic Chemotherapy as an Option. The battle against cancer in veterinary patients, other than those listed above. I feel metronomic therapy is most effective in cases where the primary tumor is adequately controlled (e.g., with surgery and/or radiation therapy), and there is no evidence of spread, AND that patient has undergone the current standard of care of treatment.

~~The use of low-dose metronomic chemotherapy in dogs ...~~

Metronomic chemotherapy is a relatively new type of chemotherapy that uses low doses of oral (pulse) chemotherapy given on a continuous treatment schedule. Since it is given daily or every other day, the chemotherapy is given at lower doses than typical chemotherapy, often with a reduced toxicity profile.

~~Metronomic Chemotherapy for Dogs with Cancer - Dog Cancer Blog~~

Metronomic chemotherapeutics are an appealing treatment option for a variety of reasons including reasonable cost, ease of drug administration, and lower toxicity profile when compared to maximum tolerated dose chemotherapy protocols. Most veterinary oncologists offer metronomic chemotherapy when a conventional chemotherapy protocol has failed or has been declined by the patient's owner.

~~Therapeutic modalities: chemotherapy and immunotherapy~~

What is metronomic chemotherapy? While traditional chemotherapy, is a drug administered intravenously at a high concentration dose every week, or every three weeks, metronomic chemotherapy is taken by the patient almost continuously. An approach that plans low dosages of drugs, with very short intervals.

~~Metronomic chemotherapy and patients~~

The most commonly used chemotherapy drug for metronomic therapy in veterinary oncology is cyclophosphamide as it is low-cost, readily available and orally administered. Methotrexate, another oral chemotherapy drug, has been used in metronomic therapy. Cyclophosphamide is frequently combined with a COX-2 inhibitor such as piroxicam and/or doxycycline.

~~When less is more: the theory of metronomic chemotherapy ...~~

Metronomic chemotherapy is well tolerated with minimal risk for bone marrow suppression or gastrointestinal (GI) upset. However, higher cumulative doses of Cytoxan have been associated with an increased risk of developing sterile hemorrhagic cystitis (SHC), which has been reported in 3.6 - 32% of dogs receiving metronomic cytoxan.

~~Metronomic Chemotherapy - Echo Veterinary Health~~

This talk will review the use of tyrosine kinase inhibitors and metronomic chemotherapy in human and veterinary oncology. We will then explore the scientific data that supports their use as an adjunct to tumor immunotherapy and potential application of this treatment strategy to our veterinary cancer patients.

~~HWVA VES Portal | Metronomic Chemotherapy in Clinical ...~~

Metronomic chemotherapy is a newer approach to cancer patients in veterinary medicine. Metronomic chemotherapy involves lower dosages of chemotherapy drugs that target tumor vasculature instead of...

~~Metronomic Chemotherapy in Veterinary Patients with Cancer ...~~

Metronomic chemotherapy Differs from traditional chemotherapy in that it is given at a low-dose that is administered every 24-48 hours. It is very important to recognize that the evidence in support of metronomic chemotherapy in veterinary patients is very limited.

~~Chemotherapy: metronomic | dogs | Vetlexicon - Canis - Fcom ...~~

Metronomic chemotherapy is an alternative form of chemotherapy in which the patient receives low doses of cytostatics, but for a long time and without interruption. Such treatment protocols are supposed to be more effective as they avoid the accelerated growth of blood vessels in a tumour that occurs when a patient is not receiving chemotherapy.

~~Metronomic Chemotherapy - Vfr.uni-lj.si~~

The median survival time was 98 days. None of the dogs developed myelosuppressive or urinary adverse effects to the metronomic chemotherapy. These preliminarily results suggest a role for metronomic chemotherapy in the management of malignant nasal neoplasia; however, long-term follow-up is necessary to assess the efficacy and toxicity of this form of chemotherapy.
