This breakthrough iteration of David Myers' best-selling text breaks down the introductory psychology course into 55 brief modules.

Focusing on experimental methods, authors Anne Myers and Christine Hansen lead students step by step through the entire research process, from generating testable hypotheses to writing the research report. The major sections of the book parallel the major sections of a research report (Introduction, Method, Results, and Discussion), giving students the skills they'll need to design and conduct an experiment, analyze and interpret the research findings, and report those findings. Although the main focus is on experimentation, alternative approaches are discussed as important complements. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

This new edition continues the story of psychology with added research and enhanced content from the most dynamic areas of the field--cognition, gender and diversity studies, neuroscience and more, while at the same time using the most effective teaching approaches and learning tools.

From his experience as an author and teacher, David Myers has concluded that students digest material more easily when it is presented in smaller chunks. Ask students whether they would prefer a 600-page book to be organized as fifteen 40-page chapters or as forty 15-page chapters and their answers will approach a consensus: students prefer shorter chapters. And research on learning strategies supports this preference: chunked material is more easily digested. Responding to student preference and learning research, Myers has created a modular version of his best-selling brief introductory text, Exploring Psychology. Exploring Psychology, Fifth Edition, in Modules reorganizes the 15 chapters of Exploring Psychology, Fifth Edition into 40 short chapters, or modules. The modular organization offers instructors more freedom to pick and choose from a smorgasbord of topics. Instead of deciding whether to assign the whole chapter on consciousness, instructors can simply assign the module on sleep and dreams, the module on hypnosis, and/or the module on drugs and behavior. Given that each module stands alone and is not dependent upon the content found in other modules, instructors can also choose to cover the modules in any order they please. Featuring the latest research and teaching innovations, Myers' new text reflects the author's continuing drive to discover the most effective way to communicate psychology's major ideas to an uninitiated audience. Note: Exploring Psychology, Fifth Edition, in Modules is now available (saleable) in two different saleable versions: a. A hardcover, spiralbound text [similar in structure to the spiralbound Myers in Modules] b. A perfectbound paperback text The features that have made David Myers' introductory psychology textbooks such phenomenal successes (compelling narrative, critical thinking theme, superior design) are all present in Exploring Psychology, Fifth Edition, in Modules. The way those hallmark features are presented is different. This is NOT a brief version of Psychology: Myers in Modules, Sixth Edition. Rather, this new text is a Modularized version of Exploring Psychology, Fifth Edition. Therefore, it enjoys all of the hallmark features of Exploring Psychology, Fifth Edition: SQ3R pedagogical system, terrific writing, and briefer coverage of key topics. It is, in fact, the same writing/content as can be found in Exploring Psychology, Fifth Edition, just with a

different organization.

David Myers' new partnership with coauthor C. Nathan DeWall matches two dedicated educators and scholars, each passionate about teaching psychological science through writing and interactive media. With this new edition of the #1 bestselling Psychology, Myers and DeWall take full advantage of what an integrated text/media learning combination can do. New features move students from reading the chapter to actively learning online: How Would You Know puts students in the role of scientific researcher and includes tutorials on key research design principles; Assess Your Strengths self-tests help students learn a little more about themselves, and include tips about nurturing key strengths. These and other innovations rest on the same foundations that have always distinguished a new David Myers edition—exhaustive updating (hundreds of new citations), captivating writing, and the merging of rigorous science with a broad human perspective that engages both the mind and heart.

Why Myers? David Myers has become the world's best-selling introductory psychology author by serving the needs of instructors and students so well. Each Myers textbook offers an impeccable combination of up-to-date research, well-crafted pedagogy, and effective media and supplements. Most of all, each Myers text demonstrates why this author's style works so well for students, with his signature compassionate, companionable voice, and superb judgment about how to communicate the science of psychology and its human impact. Why Modules? This modules-based version of Myers' best-selling, full-length text, Psychology (breaking down that book's 16 chapters into 59 short modules) is yet another example of the author's ability to understand what works in the classroom. It comes from Myers' experiences with students who strongly prefer textbooks divided into briefer segments instead of lengthier chapters, and with instructors who appreciate the flexibility offered by the modular format. Modular organization presents material in smaller segments. Students can easily read any module in a single sitting. Self-standing modules. Instructors can assign modules in their own preferred order. The modules make no assumptions about what students have previously read. Illustrations and key terms are repeated as needed. This modular organization of short, stand-alone text units enhances teacher flexibility. Instead of assigning the entire Sensation and Perception chapter, instructors can assign the module on vision, the module on hearing, and/or the module on the other senses in whatever order they choose.
