Composed of two parts, this book involved research on gender in the first part while the second part focused on research on culture. In the studies on different themes and problems, unique viewpoints were desired to be developed. Different faces of gender inequality were investigated and solutions were suggested. Moreover, various dimensions of cultural phase were examined. The book aimed at contributing to these two fields specifically and current debates in social sciences in general.

A study of the effects of foreign education and contact on the thought pattern and activities of one of Japan's leading, yet little known, intellectuals and political reforms. Ono Azusa. It is based on his diary, private papers, published works and contemporary accounts.

Today, information and technological developments grow at a rapid pace. Social and political life becomes more and more complicated and, in this process, active citizenship becomes more essential. Knowledge-driven changes in society and economies require individuals to quickly acquire new skills. Otherwise, it is increasingly difficult for employees to adapt to business life and to find a job. Education has to take account of these circumstances, adapt to the rapid developments in the world and educate individuals to continue lifelong learning. For this, skills such as active and independent learning, assertiveness, creativity, self-improvement, lifelong learning are important. Skill teaching differs from knowledge teaching. Skill is the transfer of knowledge to practice. This process involves a learning process that requires the steps of researching, planning, controlling and correcting. The knowledge should be organized, integrated, transferred into practice, mental and physical resources should be activated, and knowledge use should be demonstrated in practice in order to improve the skill. This book contributes to the teaching of skills and includes basic concepts and skills, language skills, science and mathematics skills, psycho-social skills and visual arts skills. It also explains how to teach skills, how to prepare for activities and how to implement activities in educational settings. These applications are intended to draw attention to skill teaching, to raise educators, to increase the success of education, to improve the skills of students, and to enable them to use the skills they have learned in school outside of school and in complex tasks.

As editor Kenneth E. Hendrickson, III, notes in his introduction: " Since the end of the nineteenth-century, industrialization has become a global phenomenon. After the relative completion of the advanced industrial economies of the West after 1945, patterns of rapid economic change invaded societies beyond western Europe, North America, the Commonwealth, and Japan. " In The Encyclopedia of the Industrial Revolution in World History contributors survey the Industrial Revolution as a world historical phenomenon rather than through the traditional lens of a development largely restricted to Western society. The Encyclopedia of the Industrial Revolution in World History is a

three-volume work of over 1,000 entries on the rise and spread of the Industrial Revolution across the world. Entries comprise accessible but scholarly explorations of topics from the “ aerospace industry ” to “ zaibatsu. ” Contributor articles not only address topics of technology and technical innovation but emphasize the individual human and social experience of industrialization. Entries include generous selections of biographical figures and human communities, with articles on entrepreneurs, working men and women, families, and organizations. They also cover legal developments, disasters, and the environmental impact of the Industrial Revolution. Each entry also includes cross-references and a brief list of suggested readings to alert readers to more detailed information. The Encyclopedia of the Industrial Revolution in World History includes over 300 illustrations, as well as artfully selected, extended quotations from key primary sources, from Thomas Malthus ’ “ Essay on the Principal of Population ” to Arthur Young ’ s look at Birmingham, England in 1791. This work is the perfect reference work for anyone conducting research in the areas of technology, business, economics, and history on a world historical scale.
