Macroeconomics | Economics | Khan Academy

Economics Definition: Economics is essentially a study of the usage of resources under specific constraints, all bound with an audacious hope that the subject under scrutiny is a rational entity which seeks to improve its overall well-being. Two branches within the subject have evolved thus: microeconomics (individual choices) which deals with entities and the interaction between those entities, while macroeconomics (aggregate outcomes) deals with the entire economy as a whole.

Quiz 12: Open-Economy Macroeconomics: Basic Concepts

An open economy interacts with other economies in two ways: It buys and sells goods and services in world product markets, and it buys and sells capital assets such as stocks and bonds in world financial markets.

Open Economy Macroeconomics: Basic Concepts Economics ...

Macroeconomics is 'non-experimental': like, e.g., history, macro-economics cannot conduct controlled scientific experiments (people would complain about such experiments, and with a good reason) and focuses on pure observation. Because historical episodes allow diverse interpretations, many conclusions of macroeconomics are not coercive.
