Exponent is the number of times a number is multiplied by itself. Exponents are written as x^y ; where x is the number and y is the exponent or power. Example: $2^5 = 2 * 2 * 2 * 2 * 2 = 32$ The n th root of a number x is a number r which, when raised to the power of n , equals x . i.e $r^n = x$ In the above example $2^5 = 32$, hence 2 is the 5th root of 32. Exponents []. Exponents, or powers, are a way of indicating that a quantity is to be multiplied by itself some number of times. In the expression 2^5 , 2 is called the base and 5 is called the exponent, or power. 2^5 is shorthand for "multiply five twos together": $2^5 = 2 \times 2 \times 2 \times 2 \times 2 = 32$. Notice that the exponent tells us how many bases to multiply, not how many multiplications to perform.

The Canada Council for the Arts is the country's largest provider of grants for artists and arts organizations, benefiting not only writers, visual artists, performers, and musicians but Canadian culture as a whole. In *The Roots of Culture, the Power of Art* Monica Gattinger outlines the history of the Canada Council, the impetus for its foundation, and the ongoing debate about its goals and impact. Tracing the Council's gradual shift from focusing on artistic supply and building the roots of Canadian arts and culture in its early years to its expanded focus on the power of the arts in society over time, Gattinger describes how leaders have navigated core tensions inherent in the Council's activities. She examines the arguments for and against "art for art's sake" and pursuing broader social and economic aims through the arts, as well as the inherent political conflicts between serving the needs of the artistic community and the needs of Canadian society, between leadership and
