Soldering iron tips
Soldering irons come with a tip, so you don't have to go out and get a special one, but it's important to know the differences between them and make sure you're using the right tip for the kind of soldering you're doing. Some small-wattage irons come with conical pointed

(with Pictures) -
Instructables*

Step 1 - Place a piece of the desoldering braid on top of the joint/solder you want removed. Step 2 - Heat your soldering iron and touch the tip to the top of the braid. This will heat the solder below which will then be absorbed into the desoldering braid.

Place the soldering wire near the soldering iron and move it over the joint in a small circle until it reaches back to the soldering iron. Melt just enough solder to make the joint and then pull the iron away. The molten metal should cover all the elements of the joint. Remove the soldering wire and then the iron.

For electrical work you should really use a 60/40 tin/lead rosin core fluxed solder. Avoid solder that contains an acid flux, as this may damage the materials later if not cleaned away correctly.

Rosin, which is a naturally occurring product which comes from pine trees, core solder is available in three main types - 50/50, 60/40 and 63/37.
