Over the past fifteen thousand years the Earth has witnessed dramatic changes in sea level. The last Ice Age, when coastlines were more than 700 feet below modern levels, saw rapid global warming, and over the following ten millennia, the oceans climbed in fits and starts. These changes had little impact on the humans of the day, because the earth's population was then so small, and those few

Emboldened by anonymity, individuals and organizations from both left and right are freely spewing hateful vitriol on the Internet without worrying about repercussions. Lies, bullying, conspiracy theories, bigoted and racist rants, and calls for violence targeting the most vulnerable circulate openly on the web. And thanks to the guarantees of the First Amendment and the borderless nature of the Internet, governing bodies are largely helpless to control this massive assault on human dignity and safety. Abe Foxman and Christopher Wolf expose the threat that this unregulated flow of bigotry

poses to the world. They explore how social media companies like Facebook and YouTube, as well as search engine giant Google, are struggling to reconcile the demands of business with freedom of speech and the disturbing threat posed by today's purveyors of hate. And they explain the best tools available to citizens, parents, educators, law enforcement officers, and policy makers to protect the twin values of transparency and responsibility. As Foxman and Wolf show, only an aroused and engaged citizenry can stop the hate contagion before it spirals out of control - with potentially disastrous

NATIONAL BESTSELLER • A riveting, adrenaline-fueled tour of a vast, lawless, and rampantly criminal world that few have ever seen: the high seas. There are few remaining frontiers on our planet. But perhaps the wildest, and least understood, are the world's oceans: too big to police, and under no clear international authority, these immense regions of treacherous water play host to rampant criminality and exploitation. Traffickers and smugglers, pirates and mercenaries, wreck thieves and repo men,

vigilante conservationists and elusive poachers, seabound abortion providers, clandestine oil-dumpers, shackled slaves and cast-adrift stowaways—drawing on five years of perilous and intrepid reporting, often hundreds of miles from shore, Ian Urbina introduces us to the inhabitants of this hidden world. Through their stories of astonishing courage and brutality, survival and tragedy, he uncovers a globe-spanning network of crime and exploitation that emanates from the fishing, oil, and shipping industries, and on which the world's economies rely. Both a gripping adventure

story and a stunning exposé, this unique work of reportage brings fully into view for the first time the disturbing reality of a floating world that connects us all, a place where anyone can do anything because no one is watching.

From the Nebula Award-winning author comes a newly revised edition of this story in his classic Galactic Center series.

Dive deep into the vivid underwater world of Dark Life! The oceans rose, swallowing the lowlands. Earthquakes shattered the

continents, toppling entire regions into the rising water. Now, humans live packed into stack cities. The only ones with any space of their own are those who live on the ocean floor: the Dark Life. Ty has spent his whole life living deep undersea. When outlaws attack his homestead, he finds himself in a fight to save the only home he has ever known. Joined by Gemma, a girl from Topside, Ty ventures into the frontier's rough underworld and discovers some dark secrets to Dark Life. Secrets that threaten to destroy everything.

“Thoroughly engrossing . . . a spirited, suspenseful, economically told tale whose significance is manifest and whose pace never flags.” –The Wall Street Journal From The New York Times–bestselling author of The Ghost Map and Extra Life, the story of a pirate who changed the world Henry Every was the seventeenth century’s most notorious pirate. The press published wildly popular–and wildly inaccurate–reports of his nefarious adventures. The British government offered enormous bounties for his capture, alive or (preferably) dead. But Steven Johnson argues that Every’s most lasting legacy was his

inadvertent triggering of a major shift in the global economy. Enemy of All Mankind focuses on one key event—the attack on an Indian treasure ship by Every and his crew—and its surprising repercussions across time and space. It's the gripping tale of one of the most lucrative crimes in history, the first international manhunt, and the trial of the seventeenth century. Johnson uses the extraordinary story of Henry Every and his crimes to explore the emergence of the East India Company, the British Empire, and the modern global marketplace: a densely interconnected planet ruled by nations and

corporations. How did this unlikely pirate and his notorious crime end up playing a key role in the birth of multinational capitalism? In the same mode as Johnson's classic nonfiction historical thriller *The Ghost Map, Enemy of All Mankind* deftly traces the path from a single struck match to a global conflagration.

A thirty-thousand-year history of the relationship between climate and civilization that teaches powerful lessons about how humankind can survive. Human-made climate change may have begun in the last two hundred

years, but our species has witnessed many eras of climate instability. The results have not always been pretty. From Ancient Egypt to Rome to the Maya, some of history's mightiest civilizations have been felled by pestilence and glacial melt and drought. The challenges are no less great today. We face hurricanes and megafires and food shortages and more. But we have one powerful advantage as we face our current crisis: the past. Our knowledge of ancient climates has advanced tremendously in the last decade, to the point where we can now reconstruct seasonal weather going back thousands of years and see just how people

and nature interacted. The lesson is clear: the societies that survive are those that plan ahead. *Climate Chaos* is a book about saving ourselves. Brian Fagan and Nadia Durrani show in remarkable detail what it was like to battle our climate over centuries and offer us a path to a safer and healthier future.

Animals, and our ever-changing relationship with them, have left an indelible mark on human history. Through an in-depth analysis of six truly transformative human-animal relationships, Fagan shows how our habits and

our very way of life were considerably and irreversibly altered by our intimate bond with animals. Among other stories, Fagan explores how herding changed human behavior; how the humble donkey helped launch the process of globalization; and how the horse carried a hearty band of nomads across the world and toppled the emperor of China.

The researcher who discovered the Great Pacific Garbage Patch—and remains one of today's key advocates for plastic pollution

awareness—inspires a fundamental rethinking of the modern Plastic Age. In 1997, environmentalist Charles Moore discovered the world's largest collection of floating trash—the Great Pacific Garbage Patch ("GPGP")—while sailing from Hawaii to California. Moore was shocked by the level of pollution that he saw. And in the last 20 years, it's only gotten worse—a 2018 study has found that the vast dump of plastic waste swirling in the Pacific Ocean is now bigger than France, Germany, and Spain combined—far larger than previously feared. In *Plastic Ocean*, Moore recounts his ominous findings

and unveils the secret life of plastics. From milk jugs and abandoned fishing gear to polymer molecules small enough to penetrate human skin and be unknowingly inhaled, plastic is now suspected of contributing to a host of ailments, including infertility, autism, thyroid dysfunction, and certain cancers. An urgent call to action, Plastic Ocean's sobering revelations have been embraced by activists, concerned parents, and anyone alarmed by the deadly impact and implications of this man-made environmental catastrophe.
