Physics

Hardly any
phenomenon in
the modern
environment is
as ubiquitous as
electromagnetic
fields and
waves. We have
learned to

Electromagnetic
physical
Field Dover

Physics
understand the
characteristics
of these energy
forms, and we
have applied
them in abundant
ways to
embellish our
ways of life and
our standards of
living.

Furthermore, we
have come to

depend on them
for health,
safety,
information,
comfort, and
conveyance.

Apart from their
intended roles,
these
electromagnetic
fields and waves
produce other
effects which
may influence

the activities of living organisms. The effects produced depend on many physical, chemical, and biological factors. They may be grossly apparent and visible soon after exposure of the living

may not appear
to have
influenced the
organism at all
upon casual
examination.

Even then, there
may be subtle
changes which
are only

study, or which
are apparent
only after a
considerable
time delay.

Nevertheless,
our

understanding of
the interaction
of

electromagnetic

living systems
is advancing in

a wide range of
topical areas.

This bi-annual
series with

invited reviews
by recognized
leaders in their
respective

will present
progress to date
