Numerous pathogens affect animal health and wellbeing and production efficiency. These pathogens also have a considerable impact on social economics, food safety and security, and human health. Infectious diseases that originate from both domesticated animals and wildlife

Download File

PDF User

represent one of the greatest threats to human health.

Recent studies show that domesticated species harbor approximately 84 times more zoonotic viruses than wild species. Eight of the top 10 mammalian species with the highest number of zoonotic viruses are

Download File

PDF User

domestic, such as pigs, cattle, and horses. Many animal parasites are also zoonotic, constituting an additional burden on human health.

Furthermore, the rapid emergence and spread of drug-resistant pathogen strains pose new threats to animal and

Download File

PDF User

human health.

Climate changes will undoubtedly alter

the interactions

between animals and

between animals and

humans, which will

have a huge impact

on the transmission

rate of existing

pathogens and the

emergence of new

pathogens or the

reemergence of old

Download File

PDF User

pathogens. In this special collection, interactions of all major pathogen types, including viruses, bacteria, mites and flies, protozoans, and helminths, and their hosts, such as wild and companion animals and livestock species, are discussed. Further,

Download File

PDF User

anthelmintic activities of natural products are evaluated. The relevance and utility of cutting-edge tools, such as immunology, genomics and genetics, microbiome studies and metabolomics, and molecular epidemiology, in dissecting host-

Download File

PDF User

pathogen

interactions are also discussed. This

special collection

provides a broad knowledge base that

encourages dialogue across a wide

distribution of the research community

in veterinary microbiology and

parasitology.
