lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand.

Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their

these reasons, Concepts
of Biology is grounded
on an evolutionary basis
and includes exciting
features that highlight
careers in the biological

Developmental systems
theory (DST) offers a
new conceptual
framework with which

to resolve such debates.

DST views ontogeny as contingent cycles of interaction among a

resources, no one of which controls the

process. These factors

include DNA, cellular and organismic

structure, and social and ecological interactions.

DST has excited interest
